## **REINFORCED MESH SAFETY COVER**

### **FEATURES:**

- 1) Specially formulated, reinforced polypropylene cover sheet supported by nylon/polypropylene extension straps secured to tension springs with a stainless steel buckle.
- 2) Heavy duty, triple stitched straps criss cross the pool surface, stretched tight by tension springs anchored to the deck. The premium webbing has more strength than other lesser quality webbing even when it is double sided.
- 3) Stainless steel tension springs hook over machined brass anchors set flush into the deck surface. Anchors lock and unlock easily with a heavy-duty steel installation tool. Plastic spring covers protect sensitive decking surfaces from chafing and scratching from the stainless steel springs.

### **BENEFITS:**

- 1) The cover won't hold water so algae growth on the cover is eliminated, and leaves and debris simply blow away. The spring-cleaning will require fewer chemicals; reduced chemicals mean longer life for your pool surface and a cleaner environment. Most of all the pool is safe at all times when the cover is in place.
- 2) Manufacturer warranty- 15 years.

### **MANUFACTURE AND INSTALLATION:**

- 1) Continental Pools will conduct a series of custom measurements, which are entered into a Computer Aided Design (CAD) software program at the manufacturing plant to insure exact custom sizing. This manufacturing process coupled with our expert installation insures a tight, taut and level fit every time.
- 2) Once the cover has been received at our warehouse, we will position the cover and drill a series of 3/4" holes in the deck to insert the retractable brass anchor. The straps will be positioned to allow the cover to be adjusted to compensate for minor stretching to make sure the fit is always like new.
- 3) Continental Pools will provide all labor and material necessary to install the safety mesh custom pool cover.
- 4) Continental Pools will remove all job related debris.
